BASAVARAJA HIRURU

Senior Frontend Developer | React.js | Angular | Node.js

Bengaluru, Karnataka, India | +91-7760744746 | basavaraj.hirur746@gmail.com

PROFESSIONAL SUMMARY

Senior Frontend Lead with 8+ years of experience building enterprise and e-commerce web applications using Angular (v12+) and React.js(v16), with strong expertise in TypeScript, JavaScript (ES6+), RxJS, NgRx, React Hooks, Redux Toolkit, Context API and React Router. Proven track record of improving application performance by 30%, developing 15+ reusable components that reduced code duplication by ~20%, and leading 3 AngularJS-to-Angular migrations. Hands-on experience with Node.js, Express.js and MongoDB for secure REST API development using JWT and RBAC. Experienced in automated testing, CI/CD, WCAG 2.1 accessibility, Agile/Scrum delivery, and mentoring developers.

CORE TECHNICAL SKILLS

- **Frontend (React):** React.js, React Hooks, React Query, Context API, Redux / Redux Toolkit, React Router
- **Frontend (Angular):** Angular (v10+), RxJS, NgRx
- **Core Web:** JavaScript (ES6+), TypeScript, HTML5, CSS3/SCSS, Tailwind CSS, Bootstrap
- **Architecture & Practices:** Component-Based Architecture, State Management, Code Splitting & Lazy Loading, Performance Optimization, Responsive/Cross-Browser Design, REST API Integration, Web Accessibility (WCAG 2.1, ARIA, Semantic HTML)
- **Backend & Data:** Node.js, Express.js, REST APIs, MongoDB
- **Testing & Quality:** Jest, React Testing Library (React), Karma, Jasmine (Angular, Playwright (E2E), Unit & Integration Testing, ESLint, Prettier, SonarQube, Code Reviews
- **Build & Deployment:** Bundling, Tree-Shaking, Environment-based Configuration, Angular CLI Build Configuration
- **CI/CD & Cloud:** Git/GitHub, Jenkins, Docker, AWS EC2, Nginx, Vercel, Render
- **Tools:** Postman, Chrome DevTools, VS Code, Jira, Figma; AI-assisted: GitHub Copilot, Cursor, ChatGPT
- **Practices & Leadership:** Agile/Scrum, Technical Mentoring, Cross-Functional Collaboration, Production Support

PROFESSIONAL EXPERIENCE

Lead Engineer, Web Development

Jul 2022 – Present

HCLTech | Bangalore, India

- **React development:**
  - **UI development:** Built responsive, accessible and cross-browser UI screens in React.js from Figma designs, using reusable functional components, custom Hooks and forms with controlled inputs and validation, following component-driven design for consistent, maintainable UI.
  - **Feature development:** Developed new React features from requirements through release, covering component design, REST API integration, state handling, validation, error and loading states, and production support.
  - **State management:** Managed application state with Redux Toolkit for shared, global data and with Hooks (useState, useReducer, useEffect) for local component state, keeping data flow predictable and easy to debug.
  - **Context API:** Added new features using the Context API with custom providers and useContext, sharing cross-cutting data (such as user session and UI preferences) across components and removing prop drilling without adding heavy global state.
  - **Routing & performance:** Implemented client-side routing with React Router (nested, protected and lazy-loaded routes) and optimized rendering and bundle loading using React.lazy, Suspense, React.memo, useMemo and useCallback.
  - **Testing:** Wrote unit tests for React components with Jest and React Testing Library, covering component behaviour, state changes and API-driven UI states.
- **Angular development:**
  - **UI development:** Developed and maintained enterprise-scale workforce-management applications on Infor OS using Angular, TypeScript, REST APIs, HTML5 and CSS3, delivering features based on business requirements.
  - **Component architecture:** Architected and delivered 15+ reusable Angular components, services and Reactive Forms, reducing code duplication by an estimated 20% and improving consistency across modules.
  - **State management:** Managed application state in Angular with NgRx and RxJS, keeping data flow predictable across large enterprise modules.
  - **Performance:** Improved initial application load time by 30% through lazy loading, code splitting, RxJS optimization and frontend memory-management techniques.
  - **Modernization:** Led the AngularJS-to-Angular migration of 3 legacy modules, improving maintainability, scalability and long-term performance. Adopted modern Angular features such as Signals, functional route guards, functional HTTP interceptors and the inject() function to simplify state handling and reduce boilerplate.
  - **Testing:** Wrote unit tests with Karma and Jasmine for Angular components and services.
- **End-to-end testing:** Wrote integration and end-to-end tests with Playwright across Angular and React workflows.
- **Backend development:** Developed Node.js and Express.js backend services and REST APIs to support frontend features and business workflows.
- **Security & API integration:** Implemented JWT-based authentication and role-based access control (RBAC) for secure REST API integrations, with request validation and error handling across enterprise workflows.
- **Web accessibility:** Implemented accessibility best practices (WCAG 2.1, ARIA, semantic HTML) so application screens work with assistive technologies and meet compliance expectations.

- **Quality gates & code review:** Defined and enforced engineering standards for the Angular and React codebases using ESLint, Prettier, SonarQube and structured code-review checklists covering readability, performance, accessibility and security.
- **CI/CD & DevOps:** Managed Git/GitHub branching workflows and Jenkins CI/CD pipelines supporting automated builds, testing and production deployments; supported releases and production troubleshooting.
- **Agile & leadership:** Worked in Scrum ceremonies with product, backend and QA teams, estimating stories and translating business needs into technical solutions; mentored a team of 4 junior developers through code reviews and frontend coding standards.
- **AI-assisted engineering:** Adopted GitHub Copilot and Cursor for code generation, debugging and unit-test development, improving engineering velocity.

Associate System Analyst, Web Development
Apr 2021 – Jul 2022

Wunderman Thompson Commerce | Noida, India

- **Feature development:** Built new features, reusable UI components and responsive web pages for an enterprise e-commerce platform using Angular, JavaScript, HTML5, CSS3 and Bootstrap.
- **UI delivery:** Developed breadcrumb navigation, product pages and seasonal promotional-campaign modules (New Year, Christmas) supporting peak-traffic events.
- **API integration:** Partnered with UI/UX designers and backend developers to integrate RESTful APIs and deliver responsive, user-friendly interfaces.
- **Quality:** Performed debugging, testing and defect resolution across development and deployment cycles, ensuring smooth production releases.
- **Performance:** Improved page load times by refactoring code and applying HTML/CSS/JavaScript best practices.

Software Engineer
Oct 2018 – Apr 2021

Spider Focus Solutions | Bangalore, India

- **Application development:** Built and maintained responsive web applications using HTML5, CSS3, JavaScript and React.js, ensuring cross-browser compatibility.
- **UI systems:** Designed reusable UI layouts and templates based on business and design requirements, and enhanced them through ongoing bug fixes and performance tuning.
- **Feature delivery:** Built user interfaces for request-creation and monitoring modules, ensuring responsive, intuitive workflows.
- **Enablement:** Delivered end-user training and documentation for a Content Management System (CMS), enabling business users to manage content independently.

PROJECTS

IKEA | Enterprise Integration Platform on Infor OS
Stack: *Angular, RxJS, NgRx, React.js, Redux, TypeScript, JavaScript, SCSS, Node.js, Express.js, MongoDB, REST APIs, Jenkins*

Built custom widgets in Angular and the value-driven implementation in React, with reusable components and REST API integrations, for a middleware platform connecting enterprise systems (Optiva, inforOS). Automated business workflows, improving performance and reducing manual effort.

UKG | Cloud HCM Platform
Stack: *AngularJS, Angular 11, TypeScript, SCSS, RxJS, NgRx, Jenkins, Docker, SonarQube, Nginx, AWS EC2*

Contributed to migrating legacy AngularJS applications to Angular 11, improving performance, maintainability and scalability.

Shark Ninja | Consumer Appliances Web Application
Stack: *Angular, Angular Material, Angular PWA, Intershop, SCSS, RxJS, NgRx*

Developed responsive pages and reusable UI components using Angular, RxJS and NgRx, and handled debugging, testing and defect resolution for smooth production releases.

Makro | Retail Web Application
Stack: *React.js, React Hooks, JavaScript, SCSS, Makro CMS*

Built responsive pages and reusable React.js UI components, integrated REST APIs with backend developers, and worked with UI/UX designers.

LR Solutions | Legal-Services Website
Stack: *React.js, React Hooks, React Router, JavaScript, SCSS, CMS*

Built responsive, cross-browser pages and reusable layouts with React.js components and Hooks, with ongoing bug fixes and performance tuning.

IoT Weather Monitoring Application
Stack: *React.js, React Hooks, JavaScript, SCSS, Firebase*

Built a web app showing real-time IoT sensor data using React.js components and Hooks, with authenticated access for monitoring and analysis.

EDUCATION

Bachelor of Engineering (BE), Computer Science **Jul 2015 – May 2018**

Sri Jayachamarajendra College of Engineering (SJCE), Mysore, India

LANGUAGES

Kannada, English, Hindi, Telugu
